In contrast, according to the FDA, the generic drug manufacturer must prove their drug is the same as, or bio equivalent to the brand name drug by measuring the amount of drug in the bloodstream and comparing that to the brand. However, PUTT believes this is happening for most expensive brand drugs including insulin, inhalers and even expensive specialty medications. That is why AstraZeneca's representative suggested over email that we ask the many PBMs running Medicare Part D plans why the drug costs so much emphasis added: A number of people in Congress have grown tired of the PBMs and are calling for more transparency in their dealings. The government's allegation was that AstraZeneca paid kickbacks to ensure that Medco kept Nexium on its formulary. That's when your out-of-pocket expenses start unexpectedly skyrocketing as a result of the structure of the Part D program. These drugs are supposed to treat simple, everyday ailments, like acid reflux and heartburn. They aren't the only ones concerned about the growing power of PBMs either. They encourage lower cost drugs, but clients ultimately pick what they want. For what it's worth, we did ask the PBM lobby about Nexium, and they gave us the same response they always give: The best determinant of a patient's out of pocket cost is their individual insurance plan and the respective formulary placement for a medicine. To the pharmacists, these conflicts are made worse by the PBM's secretive contracts. Well, I'll tell you what, I don't care. Information and resources for pharmacists to help customers with their NEXIUM (esomeprazole magnesium) prescription. The following side effects have been reported by at least 1% of people taking this medication. Many of these side effects can be managed, and some may go away on their own over time.
