The programme consists of 3 parts: Acne is known to be associated with an increased risk of psychiatric disorders and there have been reports of psychiatric disorders associated with isotretinoin treatment for acne. Effects on the skin 5. Brochures providing information for prescribers, pharmacists and patients have been developed. The possibility of pregnancy must be excluded before a woman of child-bearing potential can begin isotretinoin, and measures must be taken to ensure women taking isotretinoin, or who have recently stopped isotretinoin, do not become pregnant. The British Association of Dermatologists has advice on the safe introduction and continued use of isotretinoin in acne. Other generic or non-proprietary isotretinoin products are also available. Effects on the skin Some side effects of isotretinoin on the skin are very common, arising in 1 or more of every 10 patients that take the medicine. Use of a skin moisturiser cream or ointment, and use of a lip balm, may help relieve dryness of the skin and lips. Due to ongoing concerns, a review of psychiatric reactions was carried out in Thank you for your feedback. Abnormal behaviour, psychotic disorder, suicidal ideation, suicide attempt and suicide have been reported very rarely ie in 1 in every 10, patients or fewer.
