It is theorized by some that keeping the serotonin around longer results in relief of depression. It can take some time to figure out the best combination for you, so be patient and keep your doctor informed about what is and isn't working for you. This knowledge does not reduce the anxiety. Generalized anxiety disorder is usually treated with psychotherapy, medication, or a combination of the two. Neurotransmitters like serotonin are produced by one neuron. Serious side effects are seizure and serotonin syndrome, which happens when there is too much serotonin in the body and can lead to death. People with GAD develop chronic and exaggerated worry and tension, even though nothing seems to provoke it. Rare side effects include bleeding, teeth grinding, and low sodium blood levels. It is obligatory to consult your doctor as for anything that is linked to the drugs or therapy so to avoid any unpleasant treatment side-effects. They travel between the cells and are deposited on the second neuron. It is in the same class as Prozac and Zoloft. Just the thought of getting through the day may provoke anxiety. They might also feel as though they have a lump in the throat. All of the above-mentioned information does not serve as medical advice by any means. Our pharmacists are always available to answer any questions bothering you to make sure you get the right information about our Paxil medication and that the particular medicament fits your needs and does not pose any danger for you.
